

Supplement Figure

Figure S1: Concentration-effect-curves of EA and RV at A2780 and A2780CisR cells (MTT assay). In A2780 (A) EA is more potent ($pIC_{50} = 4.77 \pm 0.07$) than in A2780CisR cells (B) ($pIC_{50} = 4.44 \pm 0.95$). In contrast, the cytotoxic effect of RV in A2780 (C) ($pIC_{50} = 4.22 \pm 0.03$) is almost similar as in A2780CisR cells (D) ($pIC_{50} = 4.15 \pm 0.08$). Data shown are a typical experiment of a series of three independent experiments each with three replicates.
