

Supplementary Figure S1: ROC curve analysis for the sensitivity and specificity of LMR and CA-125 levels in predicting survival. The sensitivity was 76.0% and the specificity was 86.7% using the cut-off point of 3.45 for LMR, and the area under the ROC curve (AUC) was 0.813 (95% CI, 0.779-0.847). When 35 U/mL was chosen as the cutoff value, the sensitivity and specificity for CA-125 level were 79.8% and 73.6%, respectively, with an AUC value of 0.767 (95% CI, 0.730-0.804).
