

Figure S1. Expression of stemness-associated transcription factors in CD24+ESA+ and CD24-ESA- PANC-1 cells. **A**, Expression of several stemness-associated transcription factors were examined in CD24+ESA+ and CD24-ESA- PANC-1 cells at mRNA level by quantitative RT-PCR (mean \pm SD; n=3; *P<0.05, **P<0.01, ***P<0.001). **B**, Transcriptional activity of STAT3 in 293T. Control group was co-transfected with STAT3 luciferase reporter, Renilla plasmid and empty plasmid. Pim-3 group was co-transfected with STAT3 luciferase reporter, Renilla plasmid and Pim-3 plasmid. After 48 h, cells were harvested in passive lysis buffer and luciferase activity was assessed using a dual-luciferase assay system. Data are presented as normalized relative luciferase activity (mean \pm SD; n = 3, **p < 0.01).
