

Supplemental Figure 1 Cytotoxic effect of Doxorubicin or Doxorubicin combined with GC7 in OSCC cells transfected with eukaryotic initiation factor 5A-2 (eIF5A-2) siRNA.

Silencing of eIF5A-2 by siRNA-transfection inhibited the synergistic cytotoxic effect of Doxorubicin combined with GC7 in Cal27 (A), Tca8113 (B), and HN30 (C) cells. The best fit lines (solid) and 95% confidence intervals (dashed) are indicated for the treatments in different cells. $p > 0.05$ for Doxorubicin+GC7 vs. Doxorubicin.
