

Figure S1. Kaplan-Meier survival curves for radiographic progression free survival according to the PSA value at 6-week after radical prostatectomy and pelvic lymph node dissection: subgroup analysis of the patients who underwent androgen deprivation therapy only as an adjuvant therapy

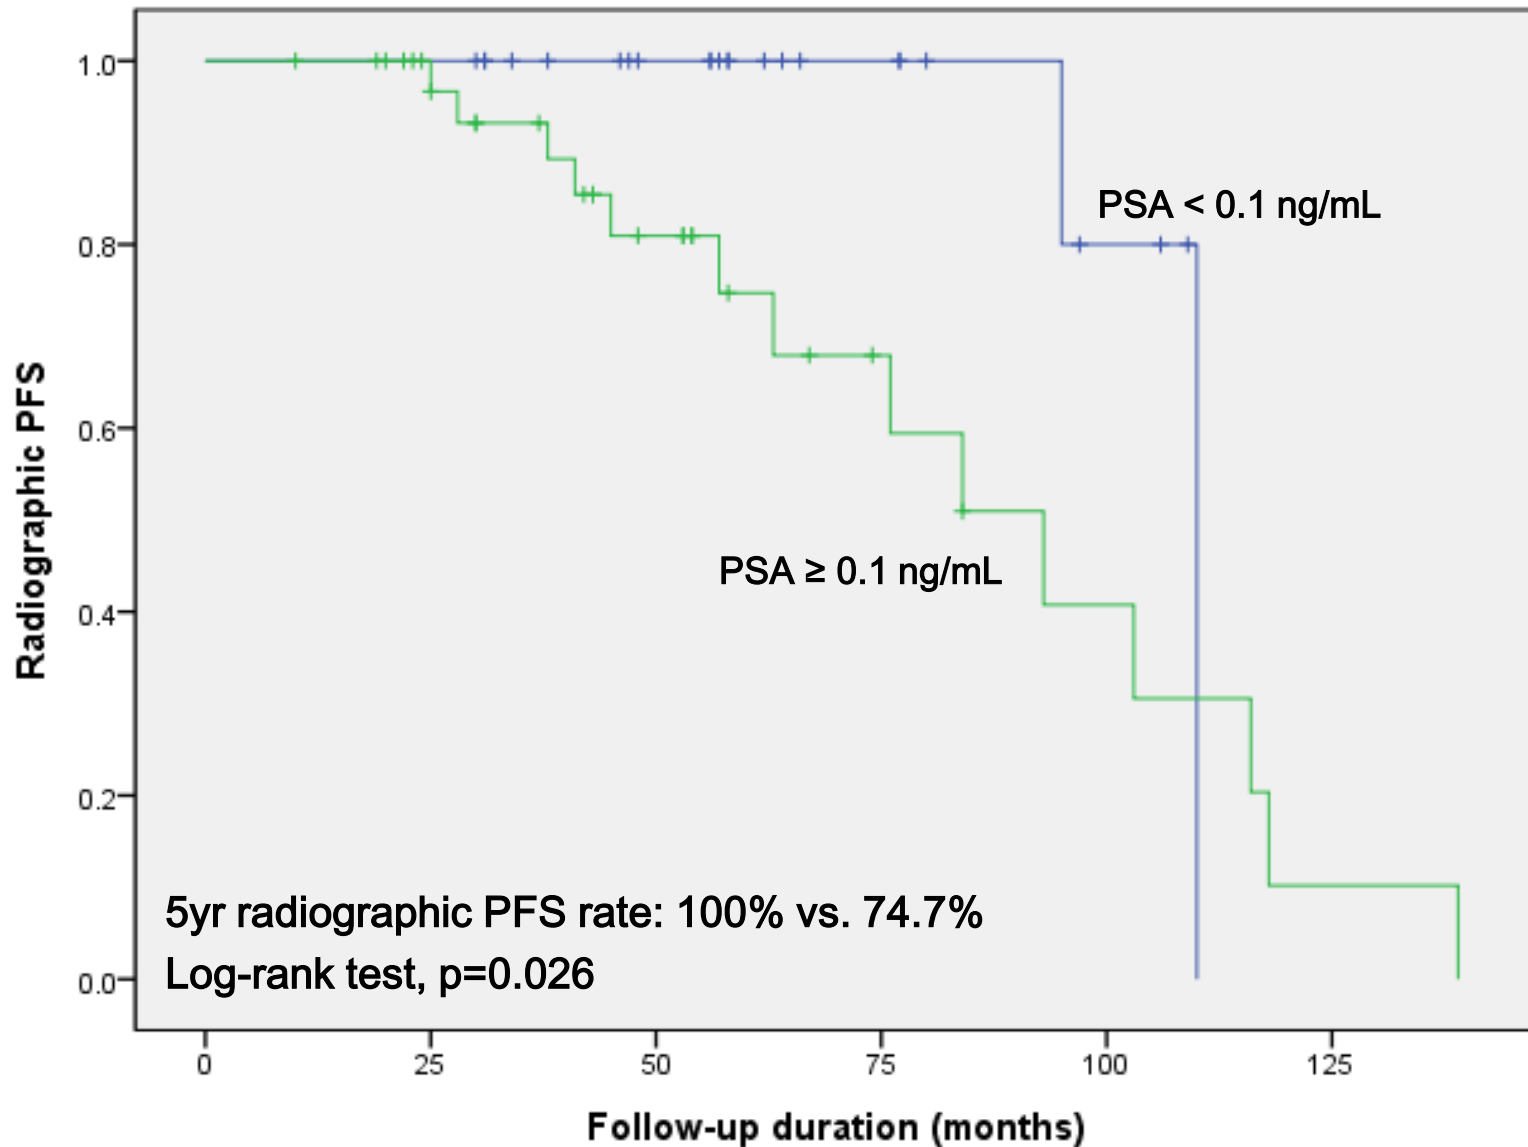

Table S1. First site of recurrence in patients with radiographic progression

Site of recurrence	Overall (n=21)	PSA persistence (n=16)	No PSA persistence (n=5)
Local (prostatic bed), n (%)	4 (19.0)	3 (18.6)	1 (20.0)
Pelvic lymph node, n (%)	3 (14.3)	2 (12.5)	1 (20.0)
Distant (skeletal and/or visceral), n (%)	14 (66.7)	11 (68.8)	3 (60.0)
