

1 **Figure S1 Stable knock down of IL-33 in K KU-055 using shRNA plasmid.** (A) Cell
2 morphology of parental K KU-055 cells had no change compared with IL-33 knocked down
3 (IL-33KD) cells. Original magnification of 200X and 400X. (B) Western blot analysis of
4 full-length IL-33 (fIL-33) level in parental and IL-33KD K KU-055 CCA cells. IL-33 was
5 completely knocked down by IL-33 shRNA. (C) The viable cells using the MTS assay of
6 parental and IL-33KD K KU-055 cells. Graph represents mean \pm SD of triplicates of one
7 experiment.
