

1 **Figure S1**, Expression levels of the innate immune pathway across various tumors. For the types of  
2 BRCA, CHOL, COAD, ESCA, LIHC, LUSC and STAD in the TCGA project, the corresponding  
3 normal tissues in the GTEx database were included as controls. The box plot data were supplied.  
4 \*P<0.01.

5  
6 **Figure S2**, The correlation between differentially expressed innate immune pathway and immune  
7 cell infiltration in cholangiocarcinoma. The correlations between the transcriptional levels of  
8 DDX58 (A), MAVS (B), IKBKE (C), TBK1 (D) and IRF3 (E) with the infiltration of B cells, CD8+  
9 T cells, CD4+ T cells, macrophages, neutrophils, and dendritic cells in cholangiocarcinoma were  
10 shown.

11  
12 **Figure S3**, Analysis of differentially expressed genes in correlation with MAVS in  
13 cholangiocarcinoma. (A) Volcano plot showing the up-regulated and down-regulated genes  
14 correlated with MAVS expression (Pearson test). The significantly positively correlated (B) and  
15 negatively correlated (C) genes were shown in heatmaps. (D) Kyoto Encyclopedia Genes and  
16 Genomes (KEGG) pathway analysis of the significantly differentially expressed genes in correlation  
17 with MAVS. (E) Gene ontology (GO) analysis of the significantly differentially expressed genes in  
18 correlation with MAVS.

19  
20 **Figure S4**, Analysis of differentially expressed genes in correlation with C6orf150 in  
21 cholangiocarcinoma. (A) Volcano plot showing the up-regulated and down-regulated genes  
22 correlated with C6orf150 expression (Pearson test). The significantly positively correlated (B) and  
23 negatively correlated (C) genes were shown in heatmaps. (D) Kyoto Encyclopedia Genes and  
24 Genomes (KEGG) pathway analysis of the significantly differentially expressed genes in correlation  
25 with C6orf150. (E) Gene ontology (GO) analysis of the significantly differentially expressed genes  
26 in correlation with C6orf150.

27  
28 **Figure S5**, Analysis of differentially expressed genes in correlation with TMEM173 in  
29 cholangiocarcinoma. (A) Volcano plot showing the up-regulated and down-regulated genes  
30 correlated with TMEM173 expression (Pearson test). The significantly positively correlated (B) and

31 negatively correlated (C) genes were shown in heatmaps. (D) Kyoto Encyclopedia Genes and  
32 Genomes (KEGG) pathway analysis of the significantly differentially expressed genes in correlation  
33 with TMEM173. (E) Gene ontology (GO) analysis of the significantly differentially expressed genes  
34 in correlation with TMEM173.

35

36 **Figure S6**, Analysis of differentially expressed genes in correlation with IKBKE in  
37 cholangiocarcinoma. (A) Volcano plot showing the up-regulated and down-regulated genes  
38 correlated with IKBKE expression (Pearson test). The significantly positively correlated (B) and  
39 negatively correlated (C) genes were shown in heatmaps. (D) Kyoto Encyclopedia Genes and  
40 Genomes (KEGG) pathway analysis of the significantly differentially expressed genes in correlation  
41 with IKBKE. (E) Gene ontology (GO) analysis of the significantly differentially expressed genes in  
42 correlation with IKBKE.

43

44 **Figure S7**, Analysis of differentially expressed genes in correlation with TBK1 in  
45 cholangiocarcinoma. (A) Volcano plot showing the up-regulated and down-regulated genes  
46 correlated with TBK1 expression (Pearson test). The significantly positively correlated (B) and  
47 negatively correlated (C) genes were shown in heatmaps. (D) Kyoto Encyclopedia Genes and  
48 Genomes (KEGG) pathway analysis of the significantly differentially expressed genes in correlation  
49 with TBK1. (E) Gene ontology (GO) analysis of the significantly differentially expressed genes in  
50 correlation with TBK1.

51

52 **Figure S8**, Analysis of differentially expressed genes in correlation with IRF3 in  
53 cholangiocarcinoma. (A) Volcano plot showing the up-regulated and down-regulated genes  
54 correlated with IRF3 expression (Pearson test). The significantly positively correlated (B) and  
55 negatively correlated (C) genes were shown in heatmaps. (D) Kyoto Encyclopedia Genes and  
56 Genomes (KEGG) pathway analysis of the significantly differentially expressed genes in correlation  
57 with IRF3. (E) Gene ontology (GO) analysis of the significantly differentially expressed genes in  
58 correlation with IRF3.

59

60 **Figure S9**, Analysis of differential expression of the antiviral signaling axis across distinct cellular

61 subtypes in cholangiocarcinoma (single-cell transcriptomic dataset GSE142784). TISCH2 analysis  
62 reveals the correlation between antiviral signaling axis expression and immune cell populations in  
63 cholangiocarcinoma.

64

65 **Figure S10**, Expression of IFNA1, IFNB1, MDA5, IFIT2, IRF1 and IRF7 in normal and  
66 intrahepatic cholangiocarcinoma tissues. IHC images demonstrating IFNA1, IFNB1, MDA5, IFIT2,  
67 IRF1 and IRF7 expression in normal liver tissue (left) or intrahepatic cholangiocarcinoma liver  
68 tissue (right).
